

SAMS Source Code

I believe the strongest key to learning how to program is to learn how to read source code. Web programming is no different. I've selected the SAMS textbook for this course in part because all of the source code presented in the book is available online.

If you have a different version of the textbook than I am using, you may have trouble finding the source code listings for assignments.

I have uploaded ALL textbook source code to GitHub and provide a link in each chapter learning module to it.

For example, for Chapter 8, here's the link - <https://github.com/upstate-csci-450-master/chap08-javascript> ➞ <https://github.com/upstate-csci-450-master/chap08-javascript>

Each chapter content presented in this section, contains a link to the source code for the chapter.

Hope this helps. It will IF you take advantage of it and study the source code. Reading code makes one better at writing code.
