PURPOSE: A continuation of the previous CSS group assignment to help you learn more of the common CSS elements.

Assignment: CSS Elements Demonstration Web Page
Description:
This assignment guides students to explore various CSS elements by studying resources on W3Schools. Students will delve into concepts such as the box model, icons, lists, tables, responsive tables, website layout components (header, nav bar, content, footer), image gallery, and float property. After understanding these elements, students will collaborate to create a sample web page showcasing each of these items. An external CSS file must be used for styling. Each team member is required to publish the web page on their class website, integrating a navigation bar for easy access.

Instructions:
1. Study the provided CSS elements on W3Schools to gain understanding.
2. Collaborate with your team to create a sample web page demonstrating each CSS element.
3. Implement an external CSS file for styling the web page.
4. Include components such as header, navigation bar, content, footer, and an image gallery.
5. Ensure responsiveness, especially for tables, and utilize the float property as needed.
6. Each team member should publish the web page on their class website.

Submission:
7. Submit the URL to the webpage and the link to the GitHub folder containing the files for assessment.
