Purpose: For this assignment, the goal is to apply the foundational concepts of HTML and CSS learned in Chapter 2 by creating a set of three web pages rich in content. Drawing inspiration from a personal interest such as a favorite hobby or a school paper, you will incorporate essential HTML tags, hyperlinks, and structured organization principles outlined in the chapter. By developing these pages, you will showcase your proficiency in creating a cohesive user experience through semantic elements, proper page structuring, and the application of diverse styles from the CSS repertoire, emphasizing both functionality and aesthetic appeal.

In this assignment you are to take what you learned in chapter 2 (HTML and CSS) and create a minimum of THREE web pages with plenty of content. You are not required to create new content. Pick something of interest to you. It could be a paper you have written for school or a favorite hobby or whatever interests you.

Demonstrate with these pages the following from chapter 2

- use the required HTML tags on every page
- use hyperlinks
  - within a page
  - to an external page (one you create)
  - to an email address
- organize the page using
  - paragraphs
  - line breaks
  - headings
- semantic elements (see figure 2.4 in textbook)
  - main header
  - nav
  - aside
  - section with header and footer
  - main footer
- create a style sheet and apply to ALL of your pages
  - demonstrate as many as you are able of the styles presented in chapter 2

Submit a clickable link to your main page. Be sure it links to your other pages. Be sure each page links back to the main page.

Submit a your HTML & CSS style sheet to a github folder named Prog03 in your course assigned github

Submit a URL to this folder
